The sampling probe 10000 BASTAK brand easy to use, dynamic, powerful, staple sampler vacuum with a bottom press it vacuums samples from the truck by vacuum system and transfer it to laboratory. It saves your time and efforts and insure a non-cheating sample

The joystick allows you to control the machine in a very easy and effective way from near the truck or from the laboratory.

The machine has the ability to move in square movement 90° Degrees to the right and 90° degrees to the left, what makes 180° degrees and also has the ability to move **up** and **down**, of flexible movement besides the movement **forward** and **backward** of the arm from 240 cm to 400 cm with its hydraulically motor not electric which makes it more strong and less malfunction.

(Hydraulic Motor)

It has standard sample transferring systems with separate push and pull vacuum units. The first pushes air into the probe while the second pulls the sample to the sample container. The vacuum motor provided with 7/8 HP, 220 Volt single phase capable of creating 104 CFM at 110° water. Standard sample container with counter weighted door to ensure effective seal. Pump units motor power is 2 HP Hydraulic pump.
